

# HBGary World-Class Professional Managed Services

## The HBGary Managed Services Advantage

*“A viable security strategy to successfully combat Advanced Persistent Threats (APT) must consist of world-class experts, cutting-edge process, and tools that address areas of disk, memory and network. HBGary fits well into that strategy.”*

– HBGary DIB Managed Services Customer

### HBGary Managed Services: Our Approach

The traditional security approaches of using the latest antivirus, whitelisting, and other signature-based technologies can't protect today's global business environment from targeted attacks. Reliance on yesterday's signatures to detect tomorrow's threat is not defense – it's housekeeping.

A division of HBGary, Inc., HBGary Managed Services recognizes that many organizations do not have sufficient resources, or subject matter expertise to deal with memory analysis and malware detection, identification and remediation, on an ongoing and continuous basis. We offer advanced technology, an expert team and unparalleled threat intelligence customized to mitigate risks in your current environment.

### HBGary Managed Services Technology Platform

Security requires that your Enterprise continually gets smarter – it must learn how the attackers work so it can get better at detecting them. HBGary Managed Services utilizes the complete, continuous protection product suite that provides you critical intelligence about the advanced, stealth attackers in your system.

### Managed Services Benefits

- Access to state-of-the-art technologies and experts, without need to increase staff
- Unprecedented network visibility to mitigate incidents quickly and cost-effectively

### Emergency Incident Response Services Benefits

- Using HBGary software, pinpoint the attacker's method of entry, the extent and duration of the intrusion and exact data compromised to "kill" any malware or rogue processes
- Access to specific threat intelligence to your custom business environment, as well as shared APT and targeted attack threat intelligence gathered from around the world

## Critical Infrastructure Health Checks

HBGary automatically locates all executables on the network (including memory), analyze suspicious process behavior, and weight the executable against our core Digital DNA™ technology to alert the operator of suspicious software residing in your network. We detect not only running processes, but also non-running processes, rootkits, hidden processes, renamed executables and obfuscated applications.

## HBGary Managed Services Provides Critical Threat Intelligence

### On the Host

- Daily detection of new exploits and techniques
- Daily “Master” IOC scans = collective sharing without attribution

### At the Perimeter

- CnC/DynDNS blacklists and protocol resets
- Dynamic TOR exit node refresh and mitigation
- Code and document sandboxing and analysis

### Shared Across All Clients

- IOCs are provided automatically in a form of a library that is auto-updated and shared across all clients. Customers can pick and choose from many search definitions to create their own custom searches.

### Remediation

- Agentless scans to Inoculate against future threats

## About HBGary, INC.

HBGary, Inc. was founded in 2003 to develop products to counter APT and other unknown cyberthreats. HBGary has in-depth expertise in advanced malware, rootkits, zero-day exploits, and targeted threats. Customers include Fortune 500 corporations, DOD and other U.S. government agencies. HBGary, Inc. is headquartered in Sacramento, California.
